

GameMarket — Marketplace Foundation ERD

This document summarizes the Marketplace Foundation implemented in migration `005_marketplace_foundation.sql`.

Core relationships

Tables

games

`id`, `name`, `slug`, `description`, `image_url`, `status`, timestamps.

game_attributes

`id`, `game_id`, `name`, `slug`, `type`, required/filterable flags, status, sort order, timestamps.

game_attribute_options

Selectable values belonging to a `SELECT` attribute.

products

The public marketplace listing. Includes seller, game, title, description, price and lifecycle status.

product_images

Multiple listing images with ordering and primary-image flag.

product_attribute_values

Per-product values for game-specific attributes. `SELECT` values can reference `game_attribute_options` directly.

product_credentials

Sensitive account-delivery credentials stored separately from public product data.

Initial catalog

Valorant, ROV, PUBG, Free Fire, Genshin Impact and Honkai: Star Rail.
